Comments	

1.   General

1.1   Purpose

This document describes the new functionalities and fixes implemented in To-Increase BC BIS for Dynamics 365 Business Central V16 as well as the known issues at release time.

1.2   Audience

Partners and customers that will install or upgrade to enable the latest functionalities and features released in this version of To-Increase BC BIS.

1.3   Content List

Product	Version	Remarks
BC BIS	Business Central V15.3	

2.   New Features

Refer to https://business-central.to-increase.com/md/en-US/BIS_Whatsnew for an overview of the new features and structure.

This is a minor release containing bugfixes.

- **Added Runtime Apps in the packages**. The advantage of these are that they can be installed on Prem on customer environments with the customer license. Runtime apps are precompiled and don't require a recompile during publishing.

3.   Bug Fixes

The following issues are resolved with build 15.3.48102.0

ID	Type	Title
104706	Bug	Number series setting validation on documents moved to configuration check instead of during import
107489	Bug	XmltoXml Translator settings page didn't display that an xslt file is present in the database or not.

4. Known issues

ID	Type	Title
100297	Bug	**Codeunit conversion in mapping expressions:** In our previous release, we reported that this issue was fixed. Unfortunately, this issue remained in the product. This will be fixed in our next release.

5.   Upgrading

The following page explains how to upgrade in BIS on Business Central On-Premise versions:
