1. General

1.1 Purpose

This document describes the new functionalities and fixes implemented in To-Increase BC BIS for Dynamics 365 Business Central V15 as well as the known issues at release time.

1.2 Audience

Partners and customers that will install or upgrade to enable the latest functionalities and features released in this Version of To-Increase BC BIS.

1.3 Content list

Product	Version	Remarks
BC BIS	Business Central V15	

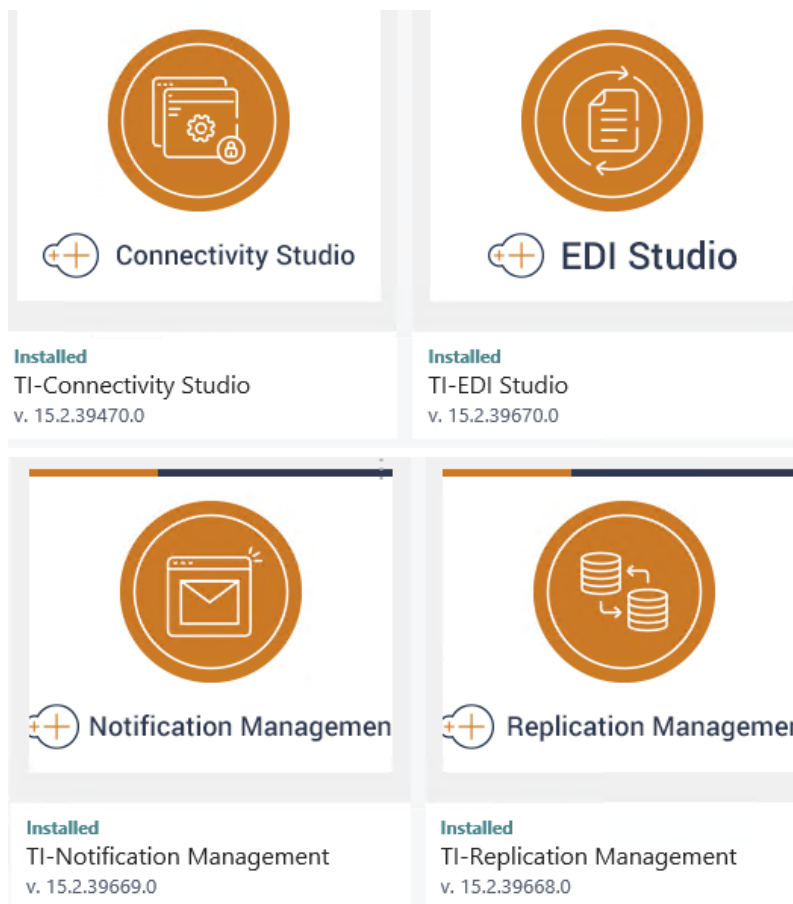

1. Aligned with Microsoft Dynamics 365 Business Central 2019 Release Wave 2, update 15.2
2. BIS has been aligned with version Build 15.2.....
3. BIS code has been converted from C/AL to AL, web client pages have been updated where necessary
4. BIS is now an extension.
5. BIS apps can be installed separately

2. New features

This is a major release where the functionality is migrated as is, the platform has been converted from C/AL to AL and the Windows client is no longer available. The product is now shipped as extensions and consists of the following applications:

- TI-Common (depend-App)
- BIS App (depend-App)
- Connectivity Studio App
- Notification Management App
- EDI Studio App
- Replication Management App

Refer to https://business-central.to-increase.com/md/en-US/BIS_Whatsnew for an overview of new features.

2. Bug Fixes

3. The following issues are resolved with build BCW114.0.00_BIS19.01.38570.0.

Issue	Description / Objects
76549	CS00062158 Error when the TableData has indirect read permission
76551	CS00062170 Jobqueue categorie code is not copied if an queued error message is reset
76626	XMLGenerator generating records out of scope In a multi-tenant/service-tier environment, it could occur that record changes which were captured on one service-tier, were not available on another tier that would run connection triggered by the RecordChange event. This rare occurrence resulted that instead of the records that were captured, all the records of the table would be exported.
78150	N108API message body not calculated when loading message entry In rare occurances from the N108API message. A message could be scheduled without the message body being calculated beforehand, resulting in compressed data being read.
78765	CS00070765: Connections cannot be published Found in BC14, also applicable in BC13Caching of recordchanges has been changed in BC, publishing doesn't go as easily as it should.
82430	Web service event - inconsistent error message It was possible that a different error message would be thrown after the error was logged in the message queue.This is remedied. A new option to continue on error has been added, making it possible to handle the web service response while still logging the error. This is only applicable for the both direction.
82947	CS00076050 Error 550 when using the FTP Reader
83199	See parent (event in BIS)
83922	Page 11069373 - optionstring in boolean field
84602	Table relation in Product registration
84682	EDI Contracts factbox
85032	CS00076924 Data type mismatch error Build still needs to run at this time: https://dev.azure.com/To-Increase/NAV/BIS/_build/xaml?_a=summary&tab=summary&refresh=1&buildId=33396
85136	CS00078655 - CS .. When rejecting a workflow the Lifecycle status is not updated Issue rejecting an approval request on a job.When rejecting an approval request on a job; the job is not automatically transferred to the rejected state.
86277	CS00079865 Wrong DLL version
87389	CS00080634 Task scheduler demand on 1 session instead of the default 10 For BIS
89221	CS00086147 Not possible to define a report in the attachment generator
89978	Updating functions does not require a server restart When a function's signature is modified (modification of arguments), to enable these modified functions in the expressions, a server restart was required and the functions needed to be reregistered in the function library.Now only the latter action needs to

	be executed. When a function is called with the incorrect parameters, it is removed from the internal buffer, and the next time it's called, the function signature will be refetched from the Function library.
90094	Lookup connector name BC14 doesn't work
91504	CS00089125 - Not possible to define an authorization code in lifecycles It was not possible anymore to define authorizations in the lifecycle conditions.
93034	Error message during import Codeunit for Function Library

3. Upgrading

This page explains about: Upgrading to Dynamics 365 Business Central 2019 Release Wave 2
<https://docs.microsoft.com/en-us/dynamics365/business-central/dev-itpro/upgrade/upgrade-overview-v15>
